

Scarlet fever

Signs & symptoms

The symptoms of scarlet fever are non-specific in early illness and may include;

- sore throat,
- headache,
- high temperature,
- nausea and vomiting.

After 12 to 48 hours the characteristic red, generalised pinhead rash develops, typically first appearing on the chest and stomach, rapidly spreading to other parts of the body, giving the skin a sandpaper-like texture.

Anyone who thinks they or a child may have it should contact a GP for a proper diagnosis and appropriate treatment.
